

Introduction

Legitronic 3.7.0 is the latest release of Weber Packaging Solution's label printing software. This release includes full support for Windows 8, new features, feature changes, and bug fixes. Supported Windows versions include Windows XP SP2 and SP3, Windows Vista Professional, Windows 7 Professional, and Windows 8 Professional.

New Features

GS1 DataMatrix Barcode Wizard

In label design, right-click on a data matrix barcode and click on GS1 DataMatrix Barcode Wizard. Use the wizard to create and encode data matrix barcodes meeting requirements of the GS1 DataMatrix specification.

Alphabetical list

Feature Changes

1. Weber Packaging Solutions is now certified as a trustworthy software publisher. Legitronic printer drivers are now supported under Windows 8 and install without warning messages.
2. The database table owner name can now be specified when selecting a table.
3. Legitronic now installs .NET 3.5 allowing the Security Administrator application to run under Windows 8.
4. The automated installer now installs both the USB and Parallel port drivers for legacy customers. Parallel port licenses keys are not available from Weber.
5. Added new ADO type library file to ensure compatibility with all supported Windows versions.
6. Changed graphic fields to properly handle a transparent background or foreground when the label option "Show fields as transparent" is ON.

Bug Fixes

1. Fixed German Translation bug with Queried Print dialogs.
2. Fixed bug with non-Weber printer driver - the print quantity could not be greater than one (1.)
3. Increased size of RAW field data from 255 to 32K.
4. Fixed problem with Latest Printer Drivers only supporting print quantities up to 32,767. The new limit is 999,999.
5. Fixed bug with automated installer sometimes not installing correctly. Both the setup.exe and the MSI file are now run.
6. Fixed bug with Datamax printer drivers not installing on Windows XP.
7. Fix bug with Legitronic crashing when the customer uses a Tracking Serial Number table without the correct column names.
8. Fixed a problem where label history did not display correct time.
9. Fixed a problem with RAW fields not printing when the property "send as a field with origin" is selected.
10. Fixed problem with serial number labels not printing correctly when serial-count=1 and identical-count >1.
11. Fixed a bug that was only seen when using label templates with the auto calculate maximum characters feature for any of the three I 2/5 barcodes (I 2/5, I 2/5 mod 10 & UPC Case Code). This value was sometimes off by a small amount.
